Oy U-Cont Ltd

Abstract

This final year project was made for Oy U-Cont Ltd, Joroinen. The primary aim of this project was to build an environmental management system. This system is based on the international standard for environmental management system, SFS-EN ISO 14001. The system is meant to be applied for certification afterwards.

The secondary aim was to attach an aspect of the safety at work to this system. In the future, these two aims will be combined to the existing quality system.

All the laws and regulations concerning the environmental management system had to be clarified. After clarifying we had to apply for all the needed licences.

Because Oy U-Cont Ltd. advertises itself as a pro-environmental company, an environmental management system is extremely important and significant. The system will act an important role in the marketing.
